

Fig. S1. The effects of PINK1/Parkin pathway on NPCs. A) CCK-8 was used to test cell proliferation ability in Blank and H89 groups. B-C) Flow cytometry was used to detect cell apoptosis in Blank and H89 groups. D) ELISA assay was used to measure the concentration of SOD, GSH-Px, ROS and MDA in Blank and H89 groups. E-F) The expression of LC3-II protein in Blank and H89 groups by Western blotting. Compared with the Blank group *P<0.05.
